EmStat Pico: Electrochemical Interface Module

The EmStat Pico is a joint development by PalmSens BV and Analog Devices Inc. PalmSens BV is known for introducing the first commercially available handheld potentiostat. Over the last decade these have evolved to become smaller and more versatile. Together with Analog Devices, PalmSens now proudly presents the world smallest potentiostat module available on the market.

With a footprint of just 18x30 mm and a height of 3 mm the EmStat Pico can be embedded into virtually any design.

> Different power modes and an ultra-low power sleep mode allow the EmStat Pico to be used in wearable applications or for long term monitoring at remote sites.

> > The EmStat Pico supports the new MethodSCRIPT™, a scripting language that allows you to let the EmStat Pico do what you want without the hassle of reading into spec sheets.

Supported Techniques

The following electrochemical techniques are supported by the EmStat Pico module.

Voltammetric techniques:

	Linear Sweep Voltammetry	LSV
•	Cyclic Voltammetry	CV
•	Square Wave Voltammetry	SWV
•	Differential Pulse Voltammetry	DPV
	Normal Pulse Voltammetry	NPV

Normal Pulse Voltammetry

The above techniques can also be used for stripping voltammetry

Techniques as a function of time:

•	Chronoamperometry	CA
•	Pulsed Amperometric Detection	PAD
•	Open Circuit Potentiometry	OCP
•	MultiStep Amperometry	MA

Electrochemical Impedance Spectroscopy

Scanning or fixed frequency mode

EIS

MethodSCRIPT[™] allows for developing custom techniques. See page 9 for more information.

Dual-channel and Bipotentiostat functionality

The second channel of the EmStat Pico can be used for running sequential measurements on two different cells each with their own Reference, Counter and Working electrodes. The second channel can also be used in Bipotentiostat mode, functioning as second Working Electrode versus the Reference and Counter electrode of channel 1. Both channels are recorded simultaneously in the Bipotentiostat mode.

The second Working Electrode (WE2) can either be set at a potential offset with respect to WE1 or at a fixed potential with respect to RE1.

The Bipotentiostat mode is supported in Low Speed mode (see table below) for all techniques, excluding EIS and OCP.

Main Specifications

The module works in three different modes;

Low Speed mode:	for scan rates up to 1 V/s or a bandwidth of 100 Hz.
High Speed mode:	for high scan rates and frequencies.
Max Range mode:	a combination of the Low and High Speed modes for optimal
	dynamic dc-potential range

General	Low Speed mode	High Speed mode	Max Range mode
 Full dc-potential range 	-1.2 to +2 V	-1.7 to +2 V	-1.7 to +2 V
 Dynamic dc-potential range ¹ 	2.2 V	1.2 V	2.6 V
 Compliance voltage 		-2.0 to +2.3 V ²	
 Maximum current 		±3 mA	
 Max. acquisition rate (datapoints/s) 	100	1000	100
 Supports FRA/EIS 	NO	YES	NO
Potentiostat (controlled potential mode)	Low Speed mode	High Speed mode	Max Range mode
Channels	2 (2x	WE, 2x RE and 2x	(CE)
 Applied dc-potential resolution 	537 µV	395 µV	932 µV
 Applied potential accuracy 	< 0.2%	< 0.5%	< 0.5%
 Available current ranges 	100 nA, 2 uA, 4 uA, 8 uA, 16 uA, 32 uA, 63 uA, 125 uA, 250 uA, 500 uA, 1 mA, 5 mA	100 nA, 1 uA, 6 uA, 13 uA, 25 uA, 50 uA, 100 uA, 200 uA, 1 mA, 5 mA	100 nA, 1 uA, 6 uA, 13 uA, 25 uA, 50 uA, 100 uA, 200 uA, 1 mA, 5 mA

¹ The dynamic range is the range that can be covered during a single scan within the full potential range. For example; a linear scan can start at -1.5 V and end at 1.1 V or vice versa, covering 2.6 V dynamic range.

² The compliance voltage is the maximum potential between Working and Counter electrode and depends on the selected mode.

EmStat Pico - Electrochemical interface module

Potentiostat (controlled potential mode)	Low Speed mode	High Speed mode	Max Range mode
Current accuracy	< 0.5% of current ±0.1% of range	< 1% of currer ±0.1% of range	
 Measured current resolution 		006% of range A on 100 nA ran	ge)
 Measured potential resolution (for OCP) 		56 µV	

FRA / EIS (impedance measurements) in High Speed Mode only

•	Frequency range	0.016 Hz to 200 kHz
	Ac-amplitude range	1 mV to 0.25 V rms, or 0.708 V peak-peak

Bipotentiostat

 Modes 	 WE2 at fixed potential (E offset vs RE1) WE2 scanning (E offset vs WE1)
 Max. potential WE2 	$\Delta E(WE1) + \Delta E(WE2) < 1.6$ V 4

Electrometer

•	Electrometer amplifier input	$>$ 1 T Ω // 10 pF
•	Bandwidth	250 kHz

Communications and peripherals

	Module communications	UART
•	Communication with external peripherals	SPI and I ² C
•	Analog I/O	3 analog input pins
•	Digital I/O	7 general-purpose I/O pins 1 wake-up pin
•	Optional on-board temperature sensor ⁵	±0.25 °C

 $^{^3}$ Channel 2 has an uncompensated series resistor (typical 110 Ω) in series with the WE2 signal. This additional resistance must be taken into account.

⁴ If your main WE1 is scanning from -0.5V to +0.5V, the WE2 can only have a maximum offset of 0.6V. ⁵ The high accurate on-board temperature sensor is standard available on modules that come with the

EmStat Pico Development Kit. For separate EmStat Pico modules the temperature sensor is optional.

EmStat Pico - Electrochemical interface module

Other

•	Storage	4000 datapoints on-board (optional external SD card can directly be connected to Pico for mass storage)
•	Mounting	Surface mounted with castellated pads Through hole pins (2.54 mm pitch)
•	Dimensions	18 x 30 x 2.6 mm
•	Operation temperature range	-40 °C to +85 °C

EIS Accuracy Contour Plot

Note

The accuracy contour plot was determined under lab conditions and should be used for reference purposes. Please note that the true limits of an impedance measurement are influenced by all components in the system, e.g. cables, the environment, and the cell.

Limits of some technique specific parameters for EmStat Pico

Normal Pulse and Differential Pulse Voltammetry	Scan rate: Pulse time:	0.02 mV/s (0.280 mV step) to 5 V/s (10 mV step) 1ms to 300ms
Square Wave Voltammetry	Frequency:	1 Hz to 500 Hz
Linear Sweep and Cyclic Voltammetry	Scan rate:	0.02 mV/s (0.280 mV step) to 5 V/s (10 mV step)
Pulsed Amperometric Detection	Interval time: Pulse time: Maximum run time:	1 ms to 10 s 1 ms to 1 s 1000000 s
ChronoAmperometry and Open Circuit Potentiometry		1 ms to 300 s 1000000 s (> 10 days at 300 s interval)
Multistep Amperometry,	Level switching overhead time: Number of levels: Number of cycles:	1 to 255

Module pin-out

All logic levels at 3.3V

MethodSCRIPT™: EmStat Pico Scripting Language

The EmStat Pico potentiostat module works with the new MethodSCRIPT[™] scripting language. This language allows developers to program a human-readable script directly into the Pico module by means of a serial (TTL) connection. The simple script language allows for running electrochemical techniques supported by EmStat Pico and makes it easy to combine different measurements and other tasks.

Example MethodSCRIPT for EIS measurement on a test circuit

MethodSCRIPT is parsed on-board the instrument. No DLLs or other type of code libraries are required for using MethodSCRIPT™

MethodSCRIPT features include:

- Use of variables
- (Nested) loops and conditional logic support
- User code during a measurement iteration
- Exact timing control
- Simple math operations on variables (add, sub, mul, div)
- Digital I/O, for example for waiting for an external trigger
- Logging results to internal storage or external SD card
- Reading auxiliary values like pH or temperature
- and many more..

Software Development Kits for .NET

Develop your own application in no time for use with any PalmSens instrument or potentiostat module or for the EmStat Pico Core.

There are three PalmSens Software Development Kits (SDKs) for .NET. Each SDK can be used with any of our instruments or OEM potentiostat modules to develop your own software. The SDK's come with a set of examples that shows how to use the libraries. PalmSens SDKs with examples are available for the following .NET Frameworks:

- WinForms
- Xamarin (Android)
- WPF

Each SDK comes with code examples for:

- Connecting
- Running measurements and plotting data
- Manual control of the cell
- Accessing and processing measured data
- Analyzing and manipulating data
- Peak detection
- Equivalent Circuit Fitting on impedance data
- Saving and loading files

EmStat Pico Development Board

The EmStat Pico Development board allows to run your experiments conveniently in our PSTrace software for electrochemistry.

> See for more information:

www.palmsens.com/picodevkit

PSTrace: research software for Windows

The EmStat Pico Development Board can be used directly with the PSTrace software for Windows. PSTrace automatically sets the EmStat Pico in the optimal mode based on the user specified method parameters.

Dynamic feedback on method parameters

Integration with third party software:

- Excel
- Origin
- Matlab
- ZView

Minimum System Requirements

Windows 7, 8, 10 or 11

R(RC)(RC)

1 GHz or faster 32-bit (x86) or 64-bit (x64) processor 2 GB RAM (32-bit) or 4 GB RAM (64-bit)
