Desktop performance in the palm of your hand

The EmStat4S is a portable, USB-powered Potentiostat, Galvanostat, and optional Frequency Response Analyser (FRA) for Electrochemical Impedance Spectroscopy (EIS). The **EmStat4S Low Range** version is great for applications that require measuring low currents down to picoamps, whereas the **High Range** version is very suitable for applications that need a maximum current of up to 200 mA.

software for

The table below shows the main differences between the Low Range (LR) and High Range (HR) versions.

	EmStat4S LR	EmStat4S HR
• potential range	±3 V	±6 V
• max. compliance	±5 V	±8 V
• current ranges	1 nA to 10 mA (8 ranges)	100 nA to 100 mA (7 ranges)
• max. current	±30 mA	±200 mA
• FRA/EIS (optional)	10 µHz to 200 kHz	
• electrodes	WE, RE, CE, and ground, 2 mm banana plugs	WE, RE, CE, S, and ground, 2 mm banana plugs

Your data always secured

The EmStat4S is equipped with internal storage memory. This allows for storing your measurement data on board seamlessly while the measurement is running. Your measurement even continues if the connection to the PC is lost. All internally stored measurements can be browsed and transferred back to the PC easily using PSTrace.

EmStat4S LR EIS Accuracy Contour Plot

EmStat4S HR EIS Accuracy Contour Plot

Note

The accuracy contour plots were determined with an ac-amplitude of ≤ 10 mV rms for all limits, except for the high impedance limit, which was determined using an ac-amplitude of 250 mV. The standard 1-meter cell cables were used. Please note that the true limits of an impedance measurement are influenced by all components in the system, e.g. connections, the environment, and the cell.
